HARMONY ECO-BAMBOO COLLECTION

The versatility of bamboo as a material for construction has long been known in the East where it is revered for its strength and flexibility. Now we in other parts of the globe are being introduced to this unique fast growing grass that forms much of China's forest regions.

The use of Bamboo as a material for flooring is a modern development but its unique properties particularly its un-paralleled hardness and environmental credentials have helped drive its growth around the world.

Harmony Eco-Bamboo uses a Strandwoven cold pressed manufacturing process that ensure our Bamboo floors are the hardest and most stable available. Accessible in a choice of two colour ranges using Harmony Eco-Bamboo will deliver a truly Zen appeal to your next project.

Harmony is revolutionising the way we think of bamboo floors. Our pre-finished lacquer system allows for a far quicker installation process avoiding lost productivity and eliminating the inconvenience associated with more traditional flooring options. Our solid bamboo construction process with cold-pressed technologies ensures a product of optimum stability and durability. In our Eco-Bamboo selection we have delivered what we believe to be the most durable and environmentally sustainable flooring product available in the market today.

SPECIES RANGE

Natural: Produced by bleaching the bamboo fibres before processing. Natural Strandwoven Bamboo has exquisite tones of honey and straw with incredible lustre that will brighten and lift any home or commercial application.

Carbonised: Produced by steaming the bamboo fibres before processing. Carbonised Strandwoven Bamboo reflects the look of more traditional timbers particularly walnut. The dark tones range from caramel brown to light greys with more variation in grain than Natural Bamboo.

FEATURES AND BENEFITS

- Solid construction for superior strength and stability.
- 4mm top allows for multiple future sands.
- A unique colour range for Zen appeal.
- Sourced from sustainable Bamboo forest that provides incomes to local communities.
- Fast growing material with high environmental credentials.
- Each board individually graded to ensure quality control.
- Precision milled with micro-beveled edges for unique aesthetics.
- Flexibility in installation methods including direct stick or floated.
- Can be installed over almost any level substrate including concrete, particle boards, plywood and existing floors such as tiles or cork.
- Can be walked on immediately post installation removing down time and inconvenience.
- Extremely dense with high durability makes it perfect for commercial applications.
- Pre-finished with unique 9 coats Aluminium Lacquer system avoids messy onsite sanding & polishing.

SPECIFICATIONS

Width	96mm
Thickness	14mm
Length	1830mm
Construction	Solid (Cold-pressed Strandwoven)
Edges	End matched Tongue & Groove with Micro-beveled profile
Finish	9 Coats Klumpp Aluminium Oxide finish with added hardener and U.V curing
Installation	Duel installation with direct stick and floated application over almost all substrates

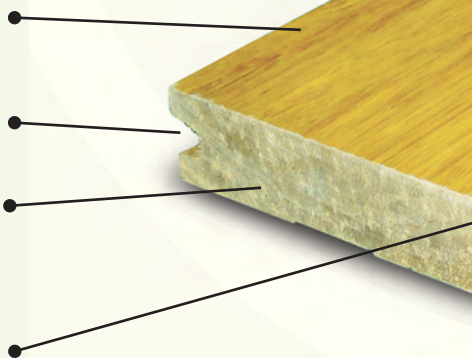

Solid Top 4mm top ensure that timber can be sanded multiple times.

Micro-Bevel Precision milled Micro-Bevel profile produces a floor with unique aesthetics.

Construction Solid throughout board. Cold Pressed Strandwoven format produces board of optimum durability and stability.

Finish Klumpp Aluminium oxide lacquers with extra hardener layer and U.V cure systems. Produce a unique finish that will last a lifetime.
